

CYCLOCELL CASSETTE CEILINGS

Modular ceiling system with facilities for grease extraction, make-up air and lighting

Cyclocell cassette ceiling is a complete ventilated ceiling system including an exhaust and supply-air system and lighting designed specifically to meet the requirements of professional kitchens. The modularity of the Cyclocell cassette ceiling enables the adding to or the re-arranging components to accommodate changes in kitchen equipment line-up. Unique clip-in feature of extract cassettes facilitates easy removal for cleaning. All extract plenums in the ceiling void are segregated from the building fabric so that there are no haunts for grease and bacteria. Modular system provides an extraction rate twice that of most systems making it suitable for the heavier duty output installation. Lighting panels illuminate very efficiently at work surface height.

Modifications and options of Cyclocell Cassette Ceiling include vertical service columns, fire suppression and trims around constructions. The system can also incorporate emergency lighting and fire rated enclosures.

A complete system will include necessary ductwork, fans and other components to provide a system that can meet virtually any requirement of the consultant, designer or architect.

Cyclocell Cassette Ceilings in Brief :

- Grease Extraction
- Make-up Air
- Fans
- Ductwork
- Lighting
- Fire Protection

Benefits of Cyclocell Cassette Ceilings :

- Unobstructed Sight Lines
- Aesthetic Design
- Flexibility for future changes
- Custom made System
- Quiet
- Clean and Sanitary
- Simple and Easy to Maintain
